

**EARTHQUAKES
WITHOUT
FRONTIERS**

Project news and updates

Welcome to the EwF Project's October 2016 Newsletter

This is the second newsletter published by the EwF Project. It is designed to communicate information to our partners about recent activities, findings and ongoing research.

Almaty

The conference convened earthquake scientists from China, Germany, Kazakhstan, Kyrgyzstan, India, Iran, Italy, Nepal and the UK, and had three aims:

- to highlight modern techniques used to understand earthquakes in Central Asia
- to provide a forum to discuss and share strategies for the mitigation of earthquake risk
- to promote effective communication of science to policy-makers and the public.

Partnerships in research

- EwF participates in the 2016 International Disaster and Risk Conference in Davos, 29-31 August

China

- Initial findings from the 'Research without Frontiers' study on cross-disciplinary, cross-cultural and cross-border collaboration
- Baseline study and in-depth interviews in Cheng Hou Village in Shaanxi

To read more about activities in-country, [click here to download the full report \(PDF\)](#)

In the next newsletter, we will present views of partners. If there is something in particular you are interested to read about or have other suggestions, please contact us at the email below.
